

Testing of Ligature Problem in Adobe Acrobat Pro

Monday, April 20, 2020 8:47 AM

If you export this document to an Adobe PDF, then review it for accessibility, if the "ligatures" are included, you'll see that words like "matter" and "intention" show up as "ma..er" and "inten..on" respectively if you tag the section as a paragraph and ask a screen reader to read it.

So far I can only get this to fail with a specific combination in QGIS. Word and ArcPro don't create problems.
